Crosshatch Seating

DESIGNED BY EOOS, 2014, 2016

Comprised of a lounge chair, side chair, and stool, the Crosshatch family of seating extends the same poetic sense of materials and functionality throughout an interior. And like most contemporary families, each individual member of the Crosshatch family contributes its own distinct features to the mix. The design of the Crosshatch Lounge Chair weaves parachute cords onto a classic wood frame. The lightweight Crosshatch Side Chair is built on a similar base concept, but with a pitch and curved wood backrest, helping it fit in around a conference table or in a lobby. The Crosshatch Stool extends the same graceful lines to bar and counter heights.

Crosshatch Seating

DESIGNED BY EOOS, 2014, 2016

OPTIONS

Crosshatch Side Chair

The Crosshatch Side Chair brings a minimalist refinement to interiors. Without over-designing any parts, EOOS optimally fashioned each element to serve its function. Lightweight and comfortable, its gently sculpted form accentuates the inherent beauty of its materials.

Crosshatch Stool

The graceful lines and rounded edges of the Crosshatch Stool highlight the inherent beauty of wood. With just a hint of a backrest, the seat provides an inviting perch. The backrest doubles as a handle, making it easy to grasp and move around this lightweight stool.

Crosshatch Lounge Chair

Using a minimum of materials in a maximally inventive way, the Crosshatch Chair employs both handcraft and technology to achieve alluringly refined results. Lightweight and transparent, the chair is extremely easy to pull up for a desk-side chat or to relax around a cocktail table.
